

Experiment 1.2

StudentName: Sanyam Singh

Branch: CSE

Semester: 6th

Subject: Java

UID:22BCS14041

Section:22BCS_631/B

DOP:23/01/25

Subject Code: 22CSH-359

Aim: Design and implement a simple inventory control system for a small video rental store

Objective: To design and implement a user-friendly inventory control system for a small video rental store, enabling efficient management of video inventory, including functionalities for adding, renting, and returning videos.

Algorithm:

- **Define Classes:**

- **Video:** To represent each video, with attributes such as video ID, title, genre, and availability status.
- **Inventory:** To manage the list of videos, including adding and removing videos from the inventory.
- **Customer:** To represent customers, with attributes such as customer ID, name, and rented videos.
- **RentalSystem:** To control the process of renting and returning videos.

- **Video Class:**

- Define the video with attributes such as `videoID`, `title`, `genre`, and `isAvailable`.
- Define methods to mark the video as rented and returned.

- **Inventory Class:**

- Maintain a list of videos (`ArrayList<Video>`).
- Implement methods to add new videos, display available videos, and check if a video is available.

- **Customer Class:**

- Define a list to store rented videos.
- Implement methods to rent a video (if available) and return it.

- **RentalSystem Class:**

- Handle the main functionality: list available videos, allow customers to rent and return videos, and display the inventory status.

Code:

```
import java.util.ArrayList;
import java.util.Scanner;

// Class representing a Video
class Video {
    private String title;
    private boolean isAvailable;

    public Video(String title) {
        this.title = title;
        this.isAvailable = true;
    }

    public String getTitle() {
        return title;
    }

    public boolean isAvailable() {
        return isAvailable;
    }

    public void rent() {
        if (isAvailable) {
            isAvailable = false;
        } else {
            System.out.println("Error: Video is already rented out.");
        }
    }
}
```

```
}

public void returnVideo() {
    if (!isAvailable) {
        isAvailable = true;
    } else {
        System.out.println("Error: Video was not rented.");
    }
}

@Override
public String toString() {
    return "Title: " + title + " | Available: " + (isAvailable ? "Yes" : "No");
}
}

// Class representing the Video Store
class VideoStore {
    private ArrayList<Video> inventory;

    public VideoStore() {
        inventory = new ArrayList<>();
    }

    // Add a new video to the inventory
    public void addVideo(String title) {
        for (Video video : inventory) {
            if (video.getTitle().equalsIgnoreCase(title)) {
                System.out.println("Error: Video already exists in the inventory.");
                return;
            }
        }
        inventory.add(new Video(title));
        System.out.println("Video added successfully: " + title);
    }

    // List all videos in the inventory
    public void listInventory() {
        if (inventory.isEmpty()) {
            System.out.println("No videos in inventory.");
        } else {
            System.out.println("Inventory:");
            for (int i = 0; i < inventory.size(); i++) {
                System.out.println((i + 1) + ". " + inventory.get(i));
            }
        }
    }

    // Rent a video
```

```
public void rentVideo(String title) {
    for (Video video : inventory) {
        if (video.getTitle().equalsIgnoreCase(title)) {
            if (video.isAvailable()) {
                video.rent();
                System.out.println("You rented: " + title);
            } else {
                System.out.println("Video is currently unavailable.");
            }
        }
        return;
    }
}

System.out.println("Error: Video not found in inventory.");
}

// Return a video
public void returnVideo(String title) {
    for (Video video : inventory) {
        if (video.getTitle().equalsIgnoreCase(title)) {
            if (!video.isAvailable()) {
                video.returnVideo();
                System.out.println("You returned: " + title);
            } else {
                System.out.println("Error: Video was not rented.");
            }
        }
        return;
    }
}

System.out.println("Error: Video not found in inventory.");
}

// Main class to run the Video Rental System
public class VideoRentalSystem {
    public static void main(String[] args) {
        VideoStore store = new VideoStore();
        Scanner scanner = new Scanner(System.in);

        while (true) {
            System.out.println("\n--- Video Rental Store ---");
            System.out.println("1. Add Video");
            System.out.println("2. List Inventory");
            System.out.println("3. Rent Video");
            System.out.println("4. Return Video");
            System.out.println("5. Exit");

            System.out.print("Enter your choice: ");

            // Handle invalid input for menu choices

            int choice = -1;
```

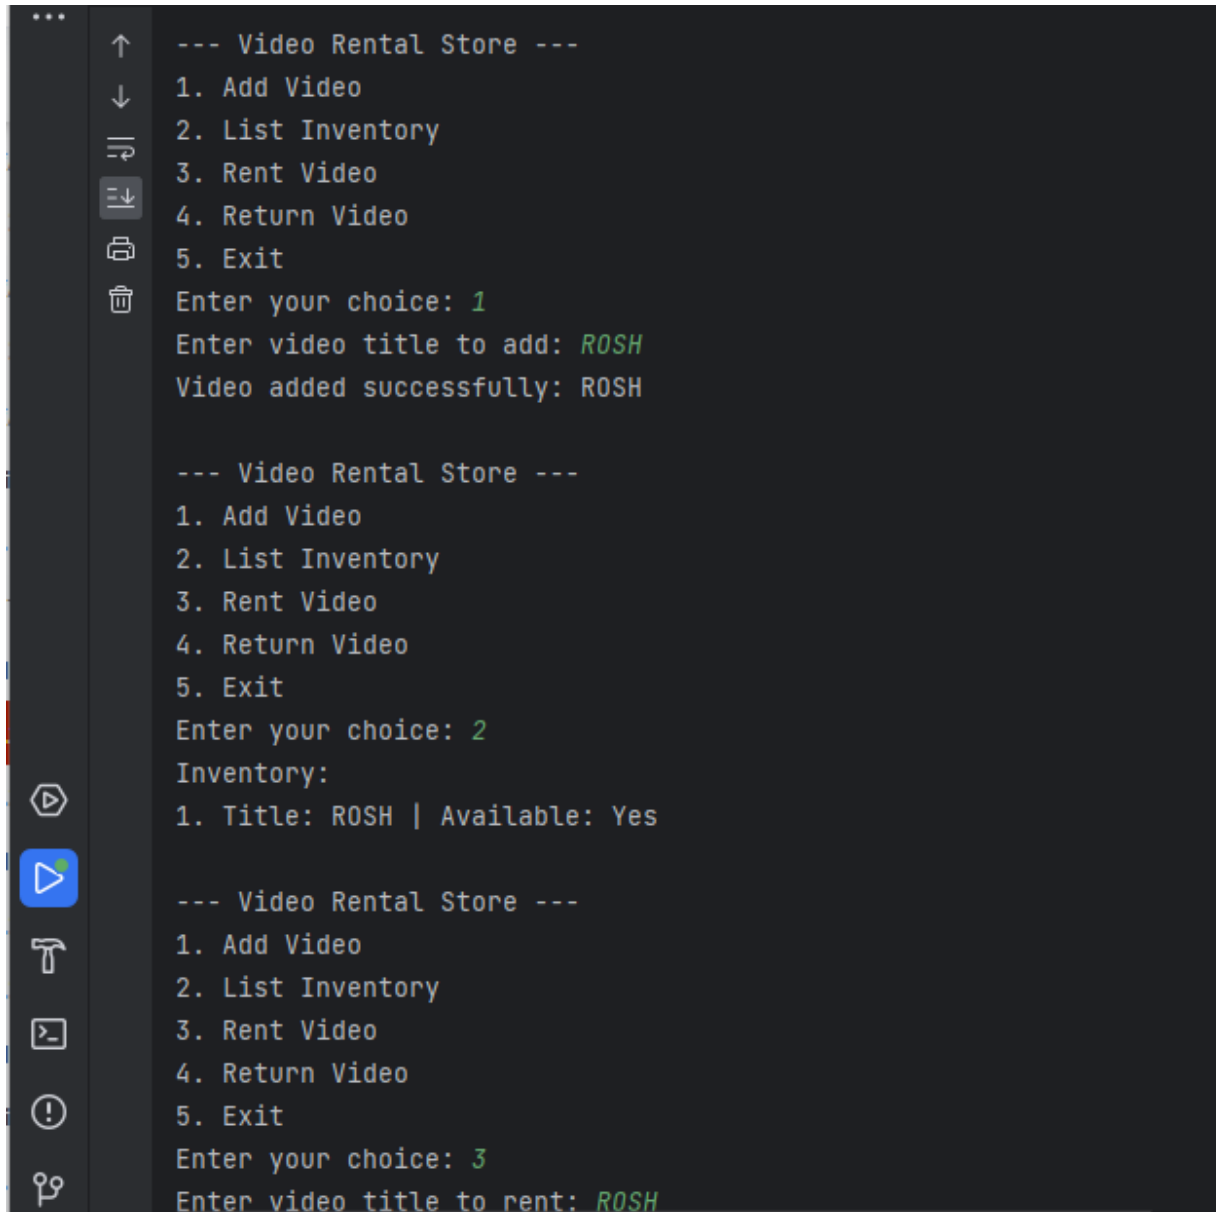

```
        if (scanner.hasNextInt()) {

            choice = scanner.nextInt();
        } else {
            System.out.println("Invalid choice. Please enter a number.");
            scanner.next(); // Consume invalid input
            continue;
        }

        scanner.nextLine();

        switch (choice) {
            case 1:
                System.out.print("Enter video title to add: ");
                String titleToAdd = scanner.nextLine().trim();
                store.addVideo(titleToAdd);
                break;
            case 2:
                store.listInventory();
                break;
            case 3:
                System.out.print("Enter video title to rent: ");
                String titleToRent = scanner.nextLine().trim();
                store.rentVideo(titleToRent);
                break;
            case 4:
                System.out.print("Enter video title to return: ");
                String titleToReturn = scanner.nextLine().trim();
                store.returnVideo(titleToReturn);
                break;
            case 5:
                System.out.println("Exiting the system. Goodbye!");
                scanner.close();
                return;
            default:
                System.out.println("Invalid choice. Please try again.");
        }
    }
}
```

Output:

```
--- Video Rental Store ---
1. Add Video
2. List Inventory
3. Rent Video
4. Return Video
5. Exit
Enter your choice: 1
Enter video title to add: ROSH
Video added successfully: ROSH

--- Video Rental Store ---
1. Add Video
2. List Inventory
3. Rent Video
4. Return Video
5. Exit
Enter your choice: 2
Inventory:
1. Title: ROSH | Available: Yes

--- Video Rental Store ---
1. Add Video
2. List Inventory
3. Rent Video
4. Return Video
5. Exit
Enter your choice: 3
Enter video title to rent: ROSH
```

Learning Outcomes:

- **Object-Oriented Design:** Learn to create and use classes for real-world entities.
- **Core Programming Skills:** Practice loops, conditionals, and methods for inventory operations.
- **Data Structure Usage:** Use `ArrayList` to manage dynamic data effectively.
- **User-Friendly Systems:** Design intuitive interfaces and handle errors smoothly.
